What's LSD?

LSD – Lambo Style Doors are the ultimate step to create that show winning vehicle you always dreamed about.

Realize your fantasies with LSD... Stand out from the crowd and get noticed! This unique styling product will transform your ride into a stunning eye-catching show winner.

LSD is the first worldwide brand to offer a complete engineered program of vehicle-specific Lambo Style Door conversion kits. Ready to install, straight out of the box, our LSD solutions take all of the guess work out for you!

Installation is as easy as bolting on the product.* Our sensational Lambo Style Door solutions utilize our patented technology assuring a safe, user-friendly complete solution with minimal installation time.

* Some trimming of the inner fender lip can be expected to accommodate the new hinge assembly, please refer to our step by step installation instructions.

All doors up with LSD

Give your ride wings in 3 easy steps!

With the new LSD door hinges the door is opened outwards as usual. Then it can be opened easily upwards with the support of the gas spring. Because of an exactly adjustable mechanism this action is secured. Closing the door in the opposite way is also secured and uncomplicated due to the patent pending "Magic Stick™" technology. The "Magic Stick™" secures itself into the socket and stops the door from dropping any further from the closing position. It is centering and adjusting the door before it will be locked in the original door lock.

World's only crash tested solution!

Side impact test for Lambo Style Doors delivers impressive safety evidence

- DEKRA-tested in compliance with R95 and ECE directive
- Any misgivings about safety can be entirely dispelled
- The requirements of the applicable directives on car manufacturers are fully met. Test confirms occupant protection and ease of rescue.
- "Made in Germany" quality

The side impact test proved it: The patented LSD hinge system offers optimum safety in the event of a side impact. The test was conducted in accordance with the directives applicable to car manufacturers, ECE- R 95, and EU directive 96/27/EEC. The DEKRA Accident Research and Crash Test Centre also confirmed: A vehicle equipped with LSD doors offers the necessary protection and guarantees optimum safety for its occupants. The stress loads on occupant dummies actually fall short of the maximum permitted values.

Optimum safety for the occupants

The side impact test impressively demonstrates the extreme loads to which components and occupants are exposed. In the side impact test, which is conducted in compliance with the applicable directives, a moving barrier is accelerated up to a speed of 50km/h (30 mph). Then this barrier is caused to impact laterally on the driver's side of the vehicle. 'At the wheel' sits a dummy, model Euro - SID 1, equipped with sensors and connected to measuring instruments. The doors did not open during the impact.

Ease of rescue

The rescue of the occupants also satisfied the EU directive to its full extent. Rescue through the passenger door was effected with no difficulty, and without the assistance of any tools. On the driver's side it was still possible to swing the door open in an upward direction, as a result of the LSD hinge mechanism. This means that in the event of a serious accident it would be possible to effect the rescue of the occupants even more swiftly.

"Made in Germany" quality

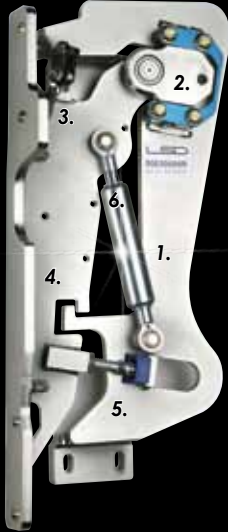

In contrast to other retrofit kits for Lambo Style Doors, the LSD door fittings, 'Made in Germany', are impressive due to their highly developed technology and the highest possible quality standards.

It All Revolves Around the Details

1. Base plate and pivot arm

- Laser-cut from high-strength steel Stahl
- Defined slots for height and depth adjustment (part of the 3-dimensional door adjustment)
- Galvanised surface finish

2. M.A.R.A. Technology - Multiple - Axis - Rotational

- **Assembly** (Adjustable aluminium C-shaped pivot arm connection)

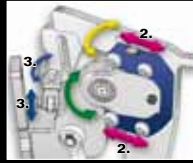

→ The (C-profile) aluminium pivot arm connection attached to the base plate can be repositioned in a longitudinal direction to adjust the gap dimensions, replacing the standard top door hinge..

→ The door first opens out as usual, up to an angle of 30°, around the vertical axis of the C-profile (depending on the vehicle model).

→ In the CNC-milled pivot bearing seat there is a special ball bearing in the horizontal axis, by means of which the door is then pivoted upward in LSD style.

3. GRS (Guided Roller System)

→ The applications LSD GRS (Guided Roller System) ensure that the entire motion sequence of the pivot arm is guided in every position by the 2-dimensional adjustment option of the roller bearing, in order to guarantee the precise opening and closing of the

↳ **LSD GRS**
Guided Roller System

door. Please see reference X in the application list on page 8-11.

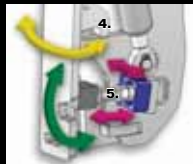

→ Applications LSD GRS+ offer in addition to the guided roller system a locking device on the top which locks the pivot arm into position. This upper adjustment guarantees an additional stabilization of the opened door. Please see reference Z in the application list on page 8-11.

↳ **LSD GRS+**
With guided roller system and upper locking device.

4. Patented safety locking

→ When the door is closed into the original lock, an interlocking connection is created between the LSD base plate and the pivot arm.

↳ **„Magic Stick™“ Technology**

5. „Magic Stick™“ Technology

→ When the door is closed, at the end of the downward motion the „Magic Stick™“ positions itself in a vertically aligned, sound absorbing polyamide seat.

→ The stabiliser can be adjusted in length to adapt to the 3-dimensional adjustment options.

→ The seating for the stabiliser has the necessary depth adjustment, ensuring that the door is also neatly closed and airtight.

6. Vehicle-specific gas springs

100% Vehicle Specific

Every LSD application has been newly developed for every single car. All important car measurements have been considered and therefore no application is similar to one another.

Ford
Focus ST

Honda
Civic

Porsche
911 Typ 997

Mazda
MX5 Cabrio

- Functional, practical, total solution
- Relatively simple to fit, no welding or structural modifications necessary
- TÜV parts certificates
- Tested according to StVZO [German road traffic regulations], ECE and EU directives

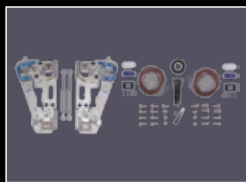

LSD – MORE THAN ONLY SHOW:
THE PERFECT SOLUTION FOR EVERYDAY USE

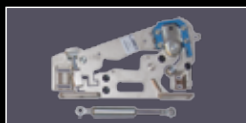

Quickfinder

We permanently develop new applications. Please find the latest update to our application list at www.lsd-doors.de

LSD Kit

Includes two complete pre-assembled LSD hinges including gas springs, complete installation and mounting materials, cable extension, insulated cable ties, waterproof insulating tape, cable clips, comprehensive installation instructions, TÜV certificate and two LSD chrome emblems.

LSD Driver Kit

Includes one complete pre-assembled LSD hinge for the driver's door including gas spring, complete installation and mounting materials, comprehensive installation instructions, TÜV certificate and one LSD chrome emblem.

LSD Co-Driver Kit

Includes all parts as in LSD Driver Kit.

LSD wire set (optional)

Includes wires, insulated cable ties, waterproof insulating tape.
